AUTHOR INDEX FOR VOLUME 68	600
----------------------------------	-----

The Subject Index for Volume 68 will appear in the December 1986 issue as part of a cumulative index for the year 1986.

A faint, light gray watermark of a classical building facade with four columns and a triangular pediment is visible in the background.

Information for Authors

The *Journal of Magnetic Resonance* includes papers dealing with the theory, techniques, methods of spectral analysis and interpretation, spectral correlations, and results of magnetic resonance spectroscopy and related fields. The Editor seeks the assistance of expert referees in the evaluation of manuscripts of articles, but he alone is responsible for the final decision concerning acceptance.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in the *Journal of Magnetic Resonance* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

A signed photocopy of the copyright assignment form which appears following this "Information" should be submitted to the Editor along with each manuscript. (This form will not be binding if the manuscript is not accepted for publication in the *Journal of Magnetic Resonance*.)

Fifty reprints of each paper are supplied without charge, and additional reprints may be ordered on a form that is sent to the authors with the proofs that the authors receive. The journal *assesses no page or publication charges*.

All manuscripts and books for review should be sent to the Editor, Wallace S. Brey, Department of Chemistry, University of Florida, Gainesville, Florida 32611.

Form of the Manuscript

Manuscripts should be submitted in triplicate. The original typewritten copy should be supplied; printout from a computer is acceptable only if it is of "letter quality." All typing must be double-spaced, including references, footnotes, and figure captions, on one side of paper approximately 22 × 28 cm (8.5 × 11 in.). Each page of the manuscript should be numbered. If the paper is lengthy, it may be divided into sections, but the sections should not be numbered. The first line of each paragraph is indented.

Cover Page. The first page contains the article title, the author's name, the laboratory where the work was done, and the address of the laboratory. At the bottom of this page should appear any footnotes to the title (indicated by superscript *, †, ‡).

Abstract. The second page of the manuscript for each regular paper should contain an abstract of 50–200 words, summarizing the nature and results of the research described. The abstract must be completely self-contained, having no references to items appearing in the body of the manuscript.

Equations, Symbols, and Abbreviations. Mathematical equations and symbols must be typewritten wherever possible. Equation numbers are given in square brackets to the right of the equation, and references in the text to equations should be in the form "Eq. [3]." Greek letters may be identified in pencil in the margin. Other nonstandard mathematical symbols should be clearly identified, in a separate list if necessary. Symbols for vectors and tensors should be clearly marked. The American Chemical Society's

Handbook for Authors, 1978 edition, or the *Style Manual of the American Institute of Physics* should be followed for standard abbreviations, names, and symbols for units.

References. Literature references are cited in numerical order in the text by *in-line*, parenthesized, italic numerals. References to "unpublished" or "to be published" work from the author's laboratory should not be given. However, papers actually accepted may be referred to as "in press" if the name of the journal is included.

The references themselves are to be typed double-spaced on a separate sheet in numerical order. Each reference contains the author's initials, last name, journal name, volume, initial page number, and year in parentheses, *in that order*. The name of the journal is abbreviated in the style of *Chemical Abstracts Service Source Index*, 1980. For book references, the form is author's name, name of the book in quotation marks, editor's name (if any), edition if other than the first, chapter or page number, publisher's name, place of publication, and year of publication.

Footnotes. Authors are urged to give careful thought to the logical construction of the manuscript, so that explanatory or parenthetical footnotes need not be employed. Any footnotes which are indispensable are not intermixed with references, but are indicated in the text by consecutive, superscript numerals, and each footnote will then appear in the print at the bottom of the page on which it is cited. In the manuscript, any footnotes to be included are gathered together in numerical order on a separate page.

Tables. Tables are numbered consecutively with Arabic numerals and are mentioned in order in the text. Each table should be laid out carefully, so that minimum space is used and entries are accurately grouped and clearly labeled. Usually, a table should be arranged vertically, with more rows than columns. Vertical lines are not used to separate the columns. Each table is provided with a title and typed on a separate sheet of paper. Footnotes to the tables are placed directly below it and are indicated by superscript, lowercase, italic letters (^{a,b,c}).

Figures and Diagrams. Figures are numbered consecutively with Arabic numerals and are mentioned in order in the text. They must be carefully drawn in black, waterproof drawing ink, to draftsman's standards, with lettering by stencil or drawing machine. Freehand, penciled, or typewritten lettering is not acceptable. Lettering should include numerical scales and units for the two axes, and should be large enough to be legible after reduction of 50–60%. Legends are to be typed together on a separate sheet. Small figures must be mounted on sheets of full manuscript page size. Larger originals must be photographically reduced to page size and glossy high-contrast prints of this size must be supplied by the author. The original and two duplicates of each figure are required. Ink drawings should also be supplied for complex molecular formulas or diagrams which the printer cannot readily set in type. Illustrations in color can be accepted only if the authors defray the cost.

Communications and Notes

Communications are preliminary accounts of work of special importance or discussions of controversial but significant topics. A Communication must be especially carefully prepared. Since it may not be refereed and the author will not receive galley proofs for correction, it is the responsibility of the author to ensure that the manuscript as submitted is free of typographical or substantive errors. The length of a Communication should be no more than that corresponding to five printed pages. Notes are complete accounts of work of limited scope. Their brevity often permits expeditious handling. Communications and Notes require no abstract and are not divided into sections.
